

# GPS Location Finder Watch

3-Locate's GPS Location Finder Watch is 4 products in 1. The device has a GPS Receiver, Data Logger, Photo Tagger and a cutting edge analog watch.

The GPS Location Finder Watch has 8 LEDs to indicate the direction you must follow in order to return to the original location. This watch can help you find your car at the mall or any large parking area at the touch of a button. Before you leave the parking area, just press the button for two seconds to save the location's coordinates. When you are walking back to your car the 360 degree directional lights on the watch will tell you which direction you should be walking. And then, when you come within 50 meters (164 feet) of the saved location, the arrows around the watch face will begin flashing, when you are within 15 meters (50 feet) the arrows will turn blue. This watch is great for anyone who needs help finding their way back to their car, hotel, or camping site.

You can also use the watch's data logger function to record all the GPS data, including location, speed, and altitude. When you get home, connect the watch to your computer and use the included iTravel Data Logger software to view all your logged paths right on Google Maps or Google Earth.
