

Waterproof GPS Tracker

For motorcycles, boats and outdoor equipment

Harsh outdoor weather requires a special device that can operate reliably in rainy or snowy conditions. 3-Locate's waterproof GPS Tracker can be used where external power is not always available, or when long stand-by times are required. This is typically the case when a tracker is required on motorcycles, boats, freight containers, outdoor equipment, etc.

3-Locate's GPS Tracker is IP66 rated which means it is completely dust tight and rain proof. It can be configured to stay in sleep mode for months by using its own back-up battery. When the external power is re-connected or turned on; the tracker will not only continue tracking but also start charging its own back-up battery automatically.

3-Locate's Waterproof GPS Tracker can take a wide power supply range from 6 to 37 volts allowing it to be attached to all kinds of vehicles and equipment.
